

Variety	Fruit tree type	Comment
BEALE	Peach	A dessert cultivar
BENDIGO BEAUTY	Peach	Ripening in the first week of the year, fruit cream and red skinned, white juicy flesh, very good cropper, precocious (potentially a decent crop in the second year, with the proper cultural conditions), fruit gradually ripens over a number of weeks, not coming all at once.
BLACKBURN ELBERTA	Peach	This peach is the pollinator for J.H.Hale's Million Dollar Peach – which is about the only peach that really needs a pollinator, larger and earlier than Elberta, flavour excellent, good grower and heavy bearer
CORONET	Peach	The Coronet peach has medium to large yellow fleshed fruit. It has a quite sweet flavour. Coronet peach is a free stone and is ideally used for fresh fruit, canning, stewing, baking and jam. It is quite a heavy cropper and self-pollinating. Fruit ripens from late December onwards. Trees grow approximately 4m x 4m.
CROYDON ANZAC	Peach	fashioned white flesh peach, very juicy with good flavour. – see Richard
FANTASIA (NEC)	Nectarine	
FLAVORCREST	Peach	Medium to large, reddish skin over yellow background. Yellow-fleshed peach, not very hairy. Freestone, good flavour, quite sweet. Prone to splitstone under drought conditions.
FLAVORTOP (NEC)	Nectarine	Early yellow flesh nectarine. Red skin with tendency to russet. Sweet, good flavour, freestone Picking Dates: 16 to 28 Jan
FLORDARED	Peach	Low chill varieties
FRAGAR	Peach	Heritage white flesh peach, pink to red skin over a greeny cream background. Flesh is softer and coarser than Tasty Zee, but with more complex flavour.
GOLDEN GEM	Peach	
GOLDEN QUEEN	Peach	Well known heritage variety of clingstone from New Zealand. Medium sized fruit, deep orange skin and firm deep orange flesh. Sweet, excellent for bottling.
HALEHAVEN	Peach	Hale Haven J. H. Hale X South Haven. Most desirable yellow freestone. Noted for its high-yielding qualities. Fruit trees need a minimum of 6-8 hours sunlight daily, and need water. They are not drought tolerant. (Self-pollinating) (zones 5-8)
J.H.HALE	Peach	aka 'Million Dollar Peach' Origin: J.H. Hale is an old-time heirloom variety. J.H. Hale Orchards began in Glastenbury, Connecticut in 1866, when John Howard Hale and his brother, George, cultivated their grandfather's seven peach trees. Description: A very large, round peach with yellow skin and red overlay and very little fuzz. Yellow flesh with a firm texture. A freestone peach. Flavour: It has a wonderfully sweet taste and aroma, and is an excellent peach for eating and canning. Matures mid to late February making it a late season variety. JH Hale is not fully self fertile - it benefits from cross pollination by an Elberta peach. Trees grow approximately 4 x 4

		metres.
LE VAINQUER	Peach	
MAYGRAND (NEC)	Nectarine	A large yellow-fleshed freestone nectarine. 'May Grand' is noted for its early maturity and excellent flavour. The skin colour is red over a yellow background. Matures early, usually before Christmas. Used for fresh fruit, drying and cooking. Tree grows to approximately 4 x 4 metres.
MONROE	Peach	Reported by many to have the best flavour of all peach varieties. Ripens in this area about August 15th. Large size, yellow flesh, freestone. 850 Hours.
O'HENRY	Peach	Prunus 'O. Henry' is a very popular old-fashioned free-stone peach with red skin and yellow flesh. It is incredibly tasty and juicy and is similar to the yellow-skinned variety 'Million Dollar', now known as 'JH Hale'. The main difference between them is that 'JH Hale' needs a pollinator, while all other peaches and nectarines are self-fertile. Large, red blush over dark yellow ground colour. Tough skin, rich yellow flesh. Very sweet, aromatic. Freestone. Lends itself to poaching and other rich peach desserts.
OOM SAREL	Peach	Yellow skin with yellow flesh. Very succulent, firm though fine. December
ORION	Peach	A dessert cultivar
PULLAR CLING	Peach	Large clingstone fruits, yellow flesh with red in the centre close to the stone, lovely flavour and very good fruits for bottling, and fresh eating, harvests very late
RED NOONAN	Peach	Prunus persica - Peach Red Noonan Peach is an excellent white fleshed freestone peach with a good rich flavour, Used for fresh fruit and juicing. Flesh: White Fruits: Prunus persica – Peach Red Noonan Peach begins fruiting in mid January to mid February. Height: 4 metres Width: 4 metres Pollination: Prunus persica - Peach Red Noonan Peach is self fertile.
REDGLOBE	Peach	A beautiful peach, the Red Globe is very large, freestone, firm and is mostly red blushed. Its flavor is wonderfully sweet and excellent for fresh eating, ice cream, canning, freezing and cooking. Crops are consistent on this <u>high chill</u> tree. Ripens early–mid August. Zones 5-8. (800 c.h.)
SMITH	Peach	
SPRINGCREST	Peach	A dessert cultivar
SUMMERSET	Peach	
SUNNYSIDE	Peach	
WIGGENS	Peach	Lovely old fashioned white fleshed peach, juicy and sweet, good quality, doesn't have the colour of some modern varieties, but the flavour is all there
